WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

A box 180 wide, 358.5 deep and 530 tall, open at the front.
Fold the sides and back from one blank (a U); rivet in a folded floor and top. Fold a 15 mm flange up along the top front edge.
Back: a 60 x 60 mm vent port, centred, 440 to 500 mm up.
Floor: four 5.5 mm holes 60 mm each side of the centre, 188.5 and 308.5 mm back from the front edge; a 40 x 30 mm cable hole on the centre, 241.5 to 271.5 mm back from the front edge.
Right wall: two 4.5 mm holes for the solenoid lock, 10 and 25 mm back from the front edge, 260 mm up (mark through the lock).
Fit: stands on the deck; the top flange is riveted to the back of the front panel above the door opening; the back is riveted to the plenum wall round the port. 16 mm air gap to the next liner.
Check: square; the port lines up with the plenum wall port.
