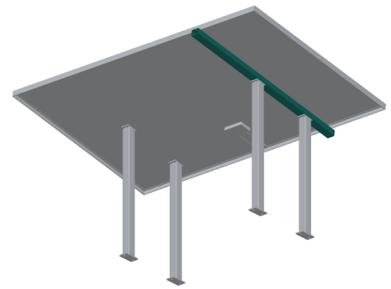
Scale 1:10; looking at the right side (along -X)



WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut two 1,174 mm lengths of 50 x 40 x 3 tube, 40 mm side up.
Post bolt holes, 9 mm through both walls, two at each post, 40 mm apart: centred 547 mm (front post) and 954 mm (rear post) from the front end.
End clamp holes, 9 mm in the top wall, 10 mm from each end.
Cap both ends with plastic tube caps.
Fit: the rails run up the slope at 460 mm each side of the centre, 20 mm past the panel's front and back edges; the panel frame sits on them and four solar end clamps hold its front and back edges. The slope is 10 degrees, high at the street side.
Check: both rails in one plane (string line across the tops).
