WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

TRIAL OPTION for the propagation trial only. The first prototype keeps plain bay floors and the aerosol unit.

Blank 215 x 208 mm; fold 20 mm sides up all round to give a tray 175 wide, 168 front to back and 20 deep; rivet the corner tabs.

Two 4.1 mm holes in the bottom, on the centre line, 40 mm in from the front and back walls.

Fit: on the bay liner floor, 2 mm behind the front panel and 3 mm in front of the cradle, 1 mm clear of each liner wall; two 4 mm stainless blind rivets through tray and liner floor.

Fill with exfoliated vermiculite to 2 mm below the rim, about 0.5 L; top up through the bay door after each trial burn.

Check: the rim is 16 mm above the door opening's bottom edge and 10 mm below the pack's connector face, so the pack slides over.
